

GridBlocker Adjustable Pump Lifting Grid *May 2017*

PRODUCT DESCRIPTION

The adjustable pump lifting grid from REA Site Services provides a safe, flexible and portable solution to temporarily covering an opening in the ground while maintenance is being carried out. The product was borne out of a requirement to aid employers, facility and utility managers and building owners in fulfilling their health and safety requirements.

In order to protect your workforce and the General Public the HSE issued the Work at Height Regulations (2005). These guidelines place duties on those responsible for control of such work particularly “where there is a risk of a fall liable to cause personal injury”.

The product can be assembled in a couple of minutes. The unique design ensures that a single set can safely protect a variety of hole sizes. Exclusively, the grid can be extended horizontally in either direction. This means different apertures are covered and the doors themselves can be positioned in the ideal place should the surrounding ground be offset.

The coupling system ensures that the bars slot together with ease and the individual locking pins safeguard the grid when in extended form. The product when in situ has been load tested to 200kgs.

PRODUCT SPECIFICATION

Material	Lightweight but strong aluminium
Dimensions	Unextended: 1200mm x 1800mm Extended: 1700mm x 2300mm
Load Weight	Tested to 200 kg
Weight	Approx. 50 kg
Locking Pins	Strong low carbon steel with added corrosion protection

PRODUCT FEATURES

- SAFE** Protect your workforce and the general public
- ADJUSTABLE** One grid fits all hole sizes
- STRONG** Load tested to 200 kg for confident lifting
- FLEXIBLE** Position opening to suit space and hole location
- PORTABLE** Robust but lightweight for ease of transport
- EASY SETUP** Quick and easy install and dismantle
